[2.5] Renewable Energy Sources in Campus

	
<p>Example of Roof and Façade Mounted Solar Panels (University of Samarra, Iraq)</p>	

Description:

Renewable Energy Sources at the University of Samarra, Iraq

Roof-mounted solar photovoltaic (PV) systems have been installed on selected university buildings, including administrative and academic facilities, to support electricity generation from renewable energy sources. These systems are used to reduce dependence on conventional electricity and contribute to campus sustainability and energy efficiency.

Solar-powered lighting systems have been implemented in some university facilities and outdoor areas to improve energy conservation and reduce electricity consumption. The systems are integrated into campus infrastructure to support sustainable operations.

The University of Samarra is gradually expanding the use of renewable energy technologies as part of its environmental sustainability strategy, including the adoption of solar energy applications in campus buildings and supporting infrastructure. These initiatives aim to reduce carbon emissions and promote green campus development.

The evidence provided may include photographs of installed solar panels, maps showing the location and distribution of renewable energy facilities, and official university reports documenting renewable energy implementation across campus..
